

Glider Lift P/N 900600

The Inca Glider Lift Assembly is a multi-purpose machine that raises a flatscreen TV from a cabinet enclosure then rotates the TV while simultaneously gliding it away from a wall, where the cabinet may be mounted. It uses a super silent driver, manufactured by Inca, on all three of its motors. Control options include touchscreen system or RF radio remote.

The Glider Lift Assembly can be purchased with a TV enclosure, manufactured by Inca, or the customer can use their own enclosure to mount the TV.

Features

- Three motor systems: lifts, slides left or right, and turns up to 90-degrees to wall
- Stable and silent motorized system
- Touchscreen compatible controller

Highlights include:

- Rigid tubular steel, all welded outer frame
- VESA compliant mounting system available
- Full cable management in place
- Super silent, lift, slider and swivel motors
- Ultra-stable platform
- Available with an Inca fabricated steel TV enclosure or the customer can construct their own version
- Ability to slide and turn 90-degrees either left or right
- Touchscreen compatible controller
