The remote controlled vertical door opening module P/N 900806-V is specifically designed to open large horizontal doors, either as a single door module or as a double /guillotine door set (2 doors). Each moving bar assembly has ¼-20 pem nuts in place, which are used to fasten brackets, to mount the door to the motorized bar. The vertical 5" deep side panels hold the linear rack gears that the motorized bar crawls up or down on to open or close the door. A controller interface box is provided so that a command signal to open the door set results in each door moving away from each other and vice versa on close. The bar assembly containing the motor and drive gears is 3.75" front to back and 4.25" thick. Each bar has its own upper and lower limit switches so that adjustable 'L' bracket switch cams, mounted on the side panels can be set to stop the door set precisely and independently at any desired point, either at the open or closed position. The articulating coil cords allow the motorized bar to move the full range of the panel. All electrical connections are aircraft, highly reliable, screw on multi-pin. The external J-Box contains the fuse, auto 'open' functions, as well as the ports on which the various controllers can be connected to actuate the door system. The external J-box is equipped with a 25' cable so that it can be remotely located away from the door set to a readily accessible location.

ITEM NUMBER	DESCRIPTION	OVERALL DIMENSIONS	MAX. DOOR DIMENSIONS	MAX. OUTER OPENING	NOTES
900806-V1	Guillotine Double Door	74.625"W x 72"H	72"W x 72"H	72"W x 60.50"H	2 Doors; Each Door 36"H
900806-V2	Guillotine Double Door	50.625"W x 48"H	48"W x 48"H	48"W x 36.50"H	2 Doors; Each Door 24"H
900806-V3	Single Door Module	50.625"W x 24"H	48"W x 24"H	48"W x 18.25"H	1 Door; 24"H
