The Inca Ultra Stable Lift P/N 900814-M and all models thereof, are specifically designed to move flat screen TV displays from concealments to any desired viewing position. The unique marine configuration provides an ultra stable lift system that can manage the large forces on a flat screen display when the vessel is underway. This special design uses four linear rack gears per side panel and four engaged spur gears per panel; 8 total on the lift. The lift side panels are fabricated from aluminum and the stainless steel lifting platform assembly is only 3.75" deep front to back, and 6.00" in height. The moving bar contains the motor and drive assembly and the external limit switch package. Inserts are included to mount manual or automatic flat screen line swivels. All units are wired UJBX to allow the attachment of any Inca flat screen line accessory or control such as: radio remote, infrared, dry contact or 12 VDC external controller. Standard sizes include models to fit the 32", 42", 50", and 61" flat screen TV displays. The

external junction box is on a cable/coil cord and it is on this J-Box that control accessories are connected. Also located on the J-box are the fuse, "auto up" switch and a selector to choose between connected controllers. External limit switches are easily adjustable and are very reliable. Standard lifts have a lift capacity of 100, 200, or 300 pounds. Eight each 1/4 - 20 pem nuts are provided on the moving platform to mount the enclosure that holds the TV.

ITEM NUMBER	DESCRIPTION	OVERALL WIDTH	PLATFORM WIDTH	DEPTH	OVERALL HEIGHT	TRAVEL HEIGHT
900814-32-M	For 32" TV	40.375"	36.75"	3.75"	33.375"	27.375"
